The AIRS/CrIS/IASI (and CHIRP) Radiatie Transfer Algorithms

AIRS Science Team Meeting

C. L. Hepplewhite[1,2], Sergio DeSouza-Machado[1,2], L. Larrabee Strow[1,21,2]

September 25, 2019

[1] UMBC Physics Dept.

[2] UMBC JCET

Overview

Overview of talk

- Current status.
- Methods.
- Programmatics.
- Validation and sample results.
- Plans.

Status

Status - 1

- kCARTA calculations of layer-to-space optical depths for all parameters for the 49 and 703 SAF regression profiles for AIRS_L1C, CrIS FSR and IASI are complete.
- The kCARTA products are based on HITRAN 2016 & LBLRTM12.8 CO2,CH4 line mixing.
- The kCARTA used to generate TOA radiances to compare directly with SARTA for validation.
- Updated version of AIRS using L1C channel set with SRFs referenced to 10Sep-2010 drift corrected.
- AIRS_L1C and IASI SARTA released May and June this year.
- CrIS FSR SARTA update for 2019 currently in work.

Status - 2

- The 2019 AIRS_L1C and IASI RTA include the fixed gases, and variable O3, H2O, CO2, CH4, HNO3, N2O, SO2, NH3, the nonLTE and improved reflected surface thermal.
- Have started working on HDO regression.
